

FIELD ERECTED TANKS

100,000 – 300,000 Gallon Capacity

Precision Tank specializes in welded above ground steel tanks used for storage of liquid fertilizer, fuel, water, chemicals and other bulk commodities.

Using our own construction crews, we build field erected tanks from 100,000 up to 3,000,000 gallons that are designed to meet your needs. Our tanks meet or exceed API 650 Standards and have increased sidewall thickness, extra heavy rafter systems and in-tank recirculation (sparge) systems.

Along with building new tanks, we also clean, inspect, test and repair existing tanks.

- Field Erected Tanks:
100,000-3,000,000 Gal
- Tank Liners
- Double Wall Tanks
- Tank Repairs
- Tank Retrofits
